**VPN connection**

Use **Cisco AnyConnect Secure Mobility Client** to connect to the VPN.

The VPN provides a secure way to access your departmental shares/files/folders

Search “**Cisco AnyConnect Secure Mobility Client**” from start menu, Choose this program.

a) The Ready to Connect box should appear and list three options: “Split Tunnel, Full Tunnel and Departmental Pools.” Select “**DEPARTMENTAL POOLS**”
(Note: If the drop down box is blank and nothing appears, please type the following; “tc-vpn-1.umn.edu”)

![Image of Cisco AnyConnect Secure Mobility Client](https://example.com/ciscoanyconnect.png)

b) In the “Group” field you may see AnyConnect-ADCSadVPN, please change the field by selecting the drop down arrow. Choose “**AnyConnect-AHC01**”. (Please ensure you have changed this field or you will have issues connecting correctly.)

![Image of Cisco AnyConnect Departmental Pools](https://example.com/ciscoanyconnectdept.png)
c) Enter your x500 Internet ID and your x500 password (email password)

(If successful you will see connected to Departmental Pools, you will now be able to access your files as you do when on the University network.)
Remote Access

Remote to your AHC workstation using **Remote Desktop Connection**.

Once connected to the VPN, you can then use Remote Access to connect to an AHC workstation on campus.

**Step 1: Find your IP address**

Make sure you have your IP address for your AHC-IS managed device you plan to remote into.

You can obtain the IP address by visiting the following URL in your browser while on the device:

**http://whatismyipaddress.com**

a) Search “**Remote Desktop**” from the start menu.

b) Select “**Remote Desktop Connection**”

c) Type your IP Address into the **Computer** field
d) Select **Connect**

e) Enter your **AD username and password** (the username and password that you use to sign on to your AHC computer/AHC server)

   Note: Enter `AD\username`

f) You should now be connected to your remote machine.
